Random UA testing Consent

Please remember that doing “random” urine testing and med counts are part of staying compliant with the requirements for the DEA. We are required to occasionally call patients to come in within 3 working days and give us a sample as well as bring in any leftover medications for counting. The DEA considers this to be a very important part of preventing “diversion” and “misuse”. As such, we will also comply with this DEA recommendation. Please be aware of the following:

- 1) you may be called at any time (ie might be 2 wks from the last office visit or even the next day).
- 2) Random means “random”... this means that we cannot wait until your next visit and that even if you were just in a few days ago you must again give a sample and bring medications for count.
- 3) you are responsible for getting your message from your phone or email or Hale app that you provided us.

If you are out of town, pls hale/email/fax us your plane ticket or some other proof that you were unable to show and we will be happy to document this. Any no-shows will be considered “failures” and may jeopardize our ability to continue taking care of you.

SUMMARY: random testing is not optional in our program.
